the folder like they don't just communicate in just one folder together they communicate in the folder together and they also communicate with the ones that are relevant to to their functionality and contributions to the functionality of the system there's a whole but it also they also talk to those or they in the Jason schema It shows the communication between what else there they correlate to and communicate with but and then I also need you should go and create a generate a very detailed technical architecture that has like really detailed or just like mermaid grabs and different types of diagrams and charts all in like the highest quality possible you can do but I need I need all these things that they're going to be a I readable and they can understand and for the choice of mermaid graphs on the high quality I wanted to be very visually appealing very professional and looking

Memex-Inspired App Builder (MIAB) System

Overview and Conceptual Foundation

The Memex-Inspired App Builder (MIAB) is a hypothetical, advanced software system modeled after Vannevar Bush's visionary Memex concept from 1945—a proto-hypertext device for personal
